A pair of dice is thrown 4 times. If getting a doublet is considered a success, find the probability distribution of a number of successes, find the probability distribution of the number of successes. Also, find the mean and variance of a number of successes. [CBSE 2008]

## Answer

Given : A die is tossed twice and 'Getting a number greater than 4 ' is considered a success.
To find : probability distribution of the number of successes and mean $(u)$ and variance $\left(\sigma^{2}\right)$
Formula used :

Mean $=\mathrm{E}(\mathrm{X})=\sum_{i=1}^{i=n} x_{i} P\left(x_{i}\right)$
Variance $=E\left(X^{2}\right)-E(X)^{2}$
When a die is tossed 4 times,

Total possible outcomes $=6^{2}=36$
Getting a doublet is considered as a success
The possible doublets are $(1,1),(2,2),(3,3),(4,4),(5,5),(6,6)$
Let $p$ be the probability of success,
$p=\frac{6}{36}=\frac{1}{6}$
$q=1-p=1-\frac{1}{6}=\frac{5}{6}$
$q=\frac{5}{6}$
since the die is thrown 4 times, $\mathrm{n}=4$
$x$ can take the values of $1,2,3,4$
$P(x)={ }^{n} C_{x} p^{x} q^{n-x}$
$P(0)={ }^{4} C_{0}\left(\frac{1}{6}\right)^{0}\left(\frac{5}{6}\right)^{4}=\frac{625}{1296}$
$P(1)={ }^{4} C_{1}\left(\frac{1}{6}\right)^{1}\left(\frac{5}{6}\right)^{3}=\frac{500}{1296}=\frac{125}{324}$
$P(2)={ }^{4} C_{2}\left(\frac{1}{6}\right)^{2}\left(\frac{5}{6}\right)^{2}=\frac{150}{1296}=\frac{25}{216}$
$P(3)={ }^{4} C_{3}\left(\frac{1}{6}\right)^{3}\left(\frac{5}{6}\right)^{1}=\frac{20}{1296}=\frac{5}{324}$
$P(4)={ }^{4} C_{4}\left(\frac{1}{6}\right)^{4}\left(\frac{5}{6}\right)^{0}=\frac{1}{1296}$
The probability distribution table is as follows,

Formula used :
The probability distribution table is given by,

Where $P(x)={ }^{n} C_{x} p^{x} q^{n-x}$
Here $p$ is the probability of getting a defective bulb.
$q=1-p$
Let the total number of bulbs produced by a machine be $x$
$20 \%$ of the bulbs produced by a machine are defective.
Number of defective bulbs produced by a machine $=\frac{20}{100} \times(x)=\frac{x}{5}$
$X$ denotes the number of defective bulbs in a sample of 4 bulbs chosen at random.
Let $p$ be the probability of getting a defective bulb,
$p=\frac{\frac{x}{5}}{x}=\frac{1}{5}$
$p=\frac{1}{5}$
$\mathrm{q}=1-\mathrm{p}=1-\frac{1}{5}=\frac{4}{5}$
$q=\frac{4}{5}$
since 4 bulbs are chosen at random, $n=4$
$X$ can take the values of $0,1,2,3,4$
$P(x)={ }^{n} C_{x} p^{x} q^{n-x}$
$P(0)={ }^{4} C_{0}\left(\frac{1}{5}\right)^{0}\left(\frac{4}{5}\right)^{4}=\frac{256}{625}$
$P(1)={ }^{4} C_{1}\left(\frac{1}{5}\right)^{1}\left(\frac{4}{5}\right)^{3}=\frac{256}{625}$
$P(2)={ }^{4} C_{2}\left(\frac{1}{5}\right)^{2}\left(\frac{4}{5}\right)^{2}=\frac{96}{625}$
$P(3)={ }^{4} C_{3}\left(\frac{1}{5}\right)^{3}\left(\frac{4}{5}\right)^{1}=\frac{16}{625}$
$P(4)={ }^{4} C_{4}\left(\frac{1}{2}\right)^{4}\left(\frac{4}{5}\right)^{0}=\frac{1}{625}$

$X$ can draw the value $0,1,2,3,4$.
since the number of bulbs drawn is $4, n=4$
$P(0)=P($ getting a no defective bulb $)=\frac{{ }_{4}^{20} \mathrm{C}}{{ }_{4}^{5} \mathrm{C}}=\frac{20 \times 19 \times 18 \times 17}{25 \times 24 \times 23 \times 22}=\frac{969}{2530}$
$P(1)=P($ getting 1 defective bulb and 3 good ones $)=\frac{{ }_{1}^{5} \mathrm{C} \times{ }_{3}^{20} \mathrm{C}}{{ }_{4}^{25} \mathrm{C}}=\frac{5 \times 20 \times 19 \times 18 \times 4}{25 \times 24 \times 23 \times 22}$
$P(1)=\frac{1140}{2530}=\frac{114}{253}$
$P(2)=P($ getting 2 defective bulbs and 2 good one $)=\frac{{ }_{2}^{5} \mathrm{C} \times{ }_{2}^{20} \mathrm{C}}{{ }_{4}^{25} \mathrm{C}}$
$P(2)=\frac{5 \times 4 \times 20 \times 19 \times 4 \times 3 \times 2}{25 \times 24 \times 23 \times 22 \times 2 \times 2}=\frac{380}{2530}=\frac{38}{253}$
$P(3)=P($ getting 3 defective bulbs and 1 good one $)=\frac{{ }_{3}^{5} \mathrm{C} \times{ }_{1}^{20} \mathrm{C}}{{ }_{2}^{5} \mathrm{C}} \frac{5 \times 4 \times 20 \times 4 \times 3 \times 2}{25 \times 24 \times 23 \times 22 \times 2}$
$P(3)=\frac{40}{2530}=\frac{4}{253}$
$P(4)=P($ getting all defective bulbs $)=\frac{{ }_{4}^{5} \mathrm{C}}{{ }_{4}^{5} \mathrm{C}}=\frac{5 \times 4 \times 3 \times 2}{25 \times 24 \times 23 \times 22}=\frac{1}{2530}$
$P(4)=\frac{1}{2530}$
The probability distribution table is as follows,

|  | 0 | 1 | 2 | 3 | 4 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\frac{969}{2530}$ | $\frac{114}{253}$ | $\frac{38}{253}$ | $\frac{4}{253}$ | $\frac{1}{2530}$ |  |
